CAMPUS SERVICES

Campus Services Capital Project Review Process

Campus Services has a consolidated capital project review process that coordinates drawing and specification distribution and review across the Campus Services and Harvard University Information Technology (HUIT) organizations, and outlines the submittal process. Additional details are provided below.

Please note that these processes are specifically for document submittal and/or review and are not intended to replace direct, regular communication between individual departments/specialists and project managers/teams as required throughout the course of a capital project.

Campus Services Review

This streamlined process provides a single point of contact that coordinates comments from all Campus Services departments (Engineering & Utilities, Facilities Maintenance Operations, Environmental Health & Safety, Office for Sustainability and, as applicable, Transportation Services, Real Estate, and Dining Services) into a single spreadsheet that is returned to the project manager. The project manager is responsible for ensuring that drawings and specifications are submitted as they are issued at each phase of design (i.e. SD, DD, CD), that Campus Services' review comments are addressed and responded to in a timely fashion and that all conflicts and/or open items are resolved prior to equipment procurement and construction.

Meetings

For all projects greater than \$5 million, an initial meeting to review the project scope is recommended with the project team and department leads in E&U, OFS, FMO, EH&S and other departments where applicable. It is also recommended that project managers schedule these meetings with Campus Services at each major design milestone to review the design team's responses to Campus Services' comments. Please contact the Campus Services Administrative Coordinator to coordinate scheduling these meetings (contact information is provided on page three of this document).

Drawing and Specifications Review

At each phase of design for all projects, the project manager should send one ½ size hard copy and a link to electronic drawings and specifications to the Campus Services Administrative Coordinator. The documents will be distributed as follows: E&U, FMO, EH&S, Transportation, OFS, Dining Services, Real Estate, and HUIT.

Once all project materials are received, the Campus Services Administrative Coordinator will confirm the anticipated date that Campus Services comments will be returned. The

HARVARD

CAMPUS SERVICES

minimum review period is ten (10) business days from receipt of all materials, so project managers should plan accordingly.

The Campus Services Administrative Coordinator will email the set of compiled comments in a standard Campus Services comments spreadsheet to the project manager and will provide a copy to Campus Services department leads.

Within two weeks of initial receipt of comments, the project manager should collect written responses to each comment from the design team, enter responses into the Campus Services comment spreadsheet, and return the document to the Campus Services Administrative Coordinator, who will distribute the comments to the Campus Services Department leads. Specific questions should be directed to the department leads identified in the contacts section at the end of this document.

Harvard University Information Technology Review

Project documents (drawings and specifications) will be distributed to three groups within HUIT (Networking/IT Infrastructure, Voice Services, and Operational Technologies) to facilitate their awareness and support of capital projects. HUIT groups will contact the project manager directly with any questions, and also provide separate comments directly to the project manager. Project managers should expect to be contacted by HUIT groups within approximately two weeks (10 business days) after receipt of project materials.
